Rustamjon Khuseinov

Front-end Developer

👤 Profile

During my school years, I started to get involved in information technology and programming. I take great pleasure in creating software solutions that solve real problems and help make our world a better place. As an aspiring front-end developer, my goal is to create web applications with clean and efficient code that provide an exceptional user experience. Besides programming, my biggest passion is traveling and exploring the world. My experience of living and working in Russia made it easier me to communicate and work together with people all over the world.

🎓 Education

Bachelor of Computer Science, Kazan State University, Kazan
September 2016 — December 2017

Bachelor of Service technologies, Kazan National Research Technological University, Kazan
